What is Virto CAD?

Virto.CAD is a powerful PV design plugin for AutoCAD and BricsCAD to speed up the design and engineering process of large-scale solar plants. It allows EPC, engineering firms and developers in the solar industry to create detailed drawings and calculations for Commercial & Industrial and utility-scale ground-mount PV projects.

Why should you use AutoCAD for solar projects?

As a software, it is extremely feature-loaded and is an in-demand skill by solar companies around the globe. AutoCAD helps solar designers create comprehensive project designs of ground-mounted, rooftop, carport and sloped roof solar projects. It also provides wire sizing, stringing, and single line diagram generation.

What is advanced AutoCAD for solar design?

Starting from project inputs and concluding with quality control, this Advanced AutoCAD for solar design course is divided into three sections: The first section is about discussing various types of design, their applications, and their inputs needed e.g., geographical location, equipment, site survey, and AHJ applicable codes.

How does pvcad auto-populate a template?

Instead of manually entering system data into the site plan, the array layout, the single-line diagram, and other documents, PVCAD auto-populates fields in the template. For example, PVCAD's IronRidge templates side cutouts of the IronRidge mounting system in the model space.
