

# Construction specifications for photovoltaic energy storage

What is a photovoltaic system?

photovoltaic system (or PV system) is a system which uses one or more solar panels to convert sunlight into electricity. It consists of multiple components, including the photovoltaic modules, mechanical and electrical connections and mountings and means of regulating and/or modifying the electrical output.

What size photovoltaic system do I Need?

1. First photovoltaic system shall be a (ground mount, roof mount) sized at xx kWAC (approximate xx kWDC) grid-tied for main facility usage. One ground mount grid-tied photovoltaic system providing approximate xx kWAC (approximate xx kWh/year for an average year using typical weather data.

How much energy does a grid-tied photovoltaic system produce?

One ground mount grid-tied photovoltaic system providing approximate xx kWAC (approximate xx kWh/year for an average year using typical weather data. Contractor shall provide all labor, equipment, transportation, material, supplies, permits, and certifications to design, furnish, install, test, deliver, and commission all four photovoltaic systems.

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement, builders should minimally specify an area of 50 square feet in order to operate the smallest grid-tied solar PV inverters on the market.

Can a PV system be installed on an inefficient building?

A PV system installed on an inefficient building is expensive and may pose a number of substantial risks. The PV system will need to be larger to cover the wasted and inefficient use, which will significantly increase the size and cost of the system, lengthen the payback period, and could potentially prevent the system from being profitable.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.
