Can solar panels be installed on a commercial roof?

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

Are solar panels easy to install?

Installing solar panels is usually relatively quick and straightforward, but it's still worth getting to know all the ins and outs of how it happens. After all, considering how much solar panels cost, it makes sense to understand the process.

Can you install solar panels on a flat roof?

Ballast systems are simply a weighted racking setup that holds solar panels in place. If you need to drill into your flat roof to install solar panels, don't worry - your solar installer will ensure that the holes they drill are as small as possible and sealed correctly to avoid roof damage or leaking. Can you install solar panels on wooden roofs?

How many solar panels should a house have?

The ideal property for solar panels would have a decent amount of space on its roof - typically we look for homes that can manage at least eight panels, but ideally it should be able to fit ten or more. It's best for a roof to be south-facing, but in some cases it's actually better with east-west roofs, as you can get more panels on.

How do solar panels attach to a roof?

Installers fix solar panels to a roof by lifting up some roof tiles and attaching mounting brackets to the rafters, before carefully placing the tiles back where they were. They'll then attach rails to these brackets, before locking solar panels into the rails.
