How do you lift solar panels to the roof?

I finished installing my DIY solar system grid tie 7.1KW on the end of 2019, but I want to share with you guys the methods I used to lift the panels to the roof. For the first 16 panels I run a steel cable between two tall trees over the top of the house. Used a pulley system to lift it and move the panel to the roof. You can see it on this video:

Do you need power tools to install solar panels?

In addition to hand tools, power tools can significantly streamline the solar panel installation process. Here are some power tools that will assist you in your solar installation journey: A reliable drill is essential for creating holes in the roof, attaching mounting hardware, and securing solar panels.

What tools do solar installers need?

Luckily for solar installers, while solar software is changing fast, many of the tools for solar panel installation have remained consistent. Let's look at the top five must-have tools that your solar field crew needs to have in the field! 1. Solar Panel Hanger

How to choose the right lifting equipment for solar panels?

Understanding the weight and dimensions of the solar panels is crucial to choosing the appropriate lifting equipment and method. Utilizing the right lifting equipment, such as cranes, hoists, or lifts, specifically designed for the task, ensures stability and control during the lifting process.

Can you lift solar panels yourself?

Though technically possible to lift solar panels yourself without professional assistance, doing so should only be attempted if you possess experience and the appropriate tools and equipment. Solar panels can be heavy and fragile objects which if improperly handled can lead to injuries or permanent damage to the panels themselves.

How do you squat a solar panel?

Squat, lift up and hold the panel near the midsection of your body, allowing for the best center of gravity. Better balance and mobility of the solar panel allows an installer to easily swing the panel behind their back as they climb a ladder and walk across a roof or to one side as necessary, with the simple movement of the wrist. What about OSHA?
