

Photovoltaic operation and maintenance channel board production

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

Do photovoltaic systems need maintenance?

The expansion of photovoltaic systems emphasizes the crucial requirement for effective operations and maintenance, drawing insights from advanced maintenance approaches evident in the wind industry. This review systematically explores the existing literature on the management of photovoltaic operation and maintenance.

How does operations & maintenance affect PV investment?

A major influence on risk and return for PV is operations and maintenance (O&M)--but O&M practices and costs vary widely across the United States, making these variables difficult for investors to predict. To address this barrier to continued PV investment, the PV O&M Working Group has developed a new best-practices guide for PV O&M.

How competitive is PV plant operation & maintenance?

The world of PV plant operation and maintenance (O&M) is increasingly competitive, reflected clearly by a significant drop in the O&M service fee over the last decade; e.g. Bloomberg New Energy Finance has reported a drop of 73% of average full-scope O&M price in Europe between 2011 and 2017.

What are NREL's best practices at the end of photovoltaic system performance period?

NREL's Best Practices at the End of the Photovoltaic System Performance Period report includes recommendations for system owners, asset managers, and industry service providers regarding the handling and disposal of waste, including reuse and recycling of PV modules and other components as a way to reduce environmental impact.

Can O&M budgeting undermine a PV plant's lifecycle performance economics?

As aptly noted by Enbar et al., such contrasting O&M budgeting viewpoints can ultimately undermine a PV plant's lifecycle performance economics.
