Why should a roof maintenance provider meet with a PV O&M team?

Failure to provide for maintenance of a roof system may result in roof-system failure, thereby necessitating PV system removal for roof repair/replacement, which is bad for the prospects of the PV system. By meeting, the roof maintenance provider can share particular areas of concern with the PV O&M team, and vice versa.

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

Can a PV system be installed on a roof?

Nevertheless, it is possible to install PV modules on all roof types. If the roof will need replacing within 5 to 10 years, it should be replaced at the time the PV system is installed to avoid the cost of removing and reinstalling the PV system.

How often should a solar PV system contractor come on site?

Manufacturer. Regular maintenance During the defect liability period (usually for 12 months after installation), solar PV system contractors usually use remote monitoring data to prepare monthly performance reports on the installed solar PV system. They should come on site to rectify any problems flagged by

Can a building-mounted solar PV system leave a gap?

gap left by the old PV module. This does not matter much on a large, ground-mounted solar PV power plant, because the new modules can form a new row. But on a building-mounted solar PV system it may spoil the aesthetics, and may cause problems
