

Who is Zhifeng Wang?

Zhifeng Wang, Professor of Institute of Electrical Engineering of Chinese Academy of Sciences (IEE-CAS).
Research Fields: Concentrating solar thermal power technology (CSP), Solar integrated building technology.
Zhifeng Wang is a professor of Institute of Electrical Engineering of Chinese Academy of Sciences (IEE-CAS).

What is design of solar thermal power plants?

Design of Solar Thermal Power Plants introduces the basic design methods of solar thermal power plants for technicians engaged in solar thermal power generation engineering. This book reads full description Since the beginning of the 21st century, energy and environmental problems have become increasingly more conspicuous.

How to design a thermal automation system in a power plant?

The lighting system of the power plant shall use a power supply network with separate normal and emergency lighting. Thermal automation design shall include meteorological instruments, a solar radiometer set, a meteorological station, thermal inspection, a thermal alarm, thermal protection, thermal control, and a thermal automation laboratory.

Does strategic positioning of solar thermal power generation promote technological progress?

Strategic positioning of solar thermal power generation to promote technological progress. Huadian Technology. DOI:10. 3969/j. issn. 1674-1951. 2021.

Can phase change materials be used in solar thermal storage?

However, regular phase-change materials (PCMs) used in actual applications are accompanied by various problems, such as inorganic PCM supercooling and phase separation, low-thermal-conductivity organic PCM, and the like, that have severely restricted the application of phase-change technology in solar thermal storage.

What is solar thermal power generation?

Join ResearchGate to contact this researcher and connect with your scientific community. Solar thermal power generation integrates photothermal conversion power generation and low-cost, large-scale heat storage, which is the primary support for constructing a green power system with new energy as the main body.
