What are photovoltaic panels & how do they work?

Photovoltaic panels, or solar panels, are the most crucial component of a solar power system. They are responsible for converting sunlight into direct current (DC) electricity through a process called the photovoltaic effect. Solar panels are made up of many individual solar cells, which are usually made from silicon, a semi-conducting material.

What are the different types of solar installations?

To differentiate the types of installations, we generally put solar into four categories: residential, commercial & industrial, community solar, and utility-scale. Here are some basics about the differences between each kind of solar installation. Homeowners nearly anywhere can benefit from a solar panel installation on their property.

What is the installation phase of a photovoltaic system?

The installation phase of photovoltaic (PV) systems is a critical step that involves several key activities to ensure the system operates effectively and safely. Here's a more detailed look at what this phase entails:

Where can I put solar panels?

You can put solar panels nearly anywhere, from a rooftop to a canopy above a parking lot to floating in the middle of a lake or a pond. To differentiate the types of installations, we generally put solar into four categories: residential, commercial & industrial, community solar, and utility-scale.

What are photovoltaic panels?

Photovoltaic (PV) panels are devices that convert sunlight into electrical energy using semiconductor materials. This process is known as the photovoltaic effect. PV panels are an essential component of solar power systems and are increasingly being deployed for both residential and large-scale power generation purposes.

Can solar panels be installed on an existing roof?

In the majority of cases, solar panels can be installed on a pre-existing roof. The position, construction, and condition of the roof will all have a significant effect on the final design and installation process of your solar system. The orientation of the roof can be easily found with a simple compass.
